About the Lowitja Institute

The Lowitja Institute is the only research organisation in Australia with a sole focus on the health and wellbeing of Australia’s First Peoples. The voice of Aboriginal and Torres Strait Islander people informs all our activities, whether we’re conducting community-based research or setting our strategic direction.

Named in honour of our Patron, Dr Lowitja O'Donoghue AC CBE DSG, our organisation works under the direction of a skills-based Board made up of a majority of Aboriginal and Torres Strait Islander members and led by an independent Chairperson. The principle of strong Aboriginal and Torres Strait Islander leadership at all levels of research and innovation is central to our identity.

We are committed to maintaining the traditions of research excellence and collaborative endeavour established over many years by our two predecessor Cooperative Research Centres (1997–2009). The Institute, launched in 2010, currently hosts the CRC for Aboriginal and Torres Strait Islander Health (CREATI) through to June 2014.

Our Vision

To achieve equity in health outcomes for Aboriginal and Torres Strait Islander peoples.

Our Dreaming

As the National Institute for Aboriginal and Torres Strait Islander Health Research, with a sole focus on the health and wellbeing of Australia’s First Peoples, we will:

• Ensure that Aboriginal and Torres Strait Islander peoples have a strong voice in all activities
• Bring together Aboriginal and Torres Strait Islander communities, health services, researchers, governments and policy makers to enable high-quality, collaborative health research that makes a difference
• Continue to develop world-leading Aboriginal and Torres Strait Islander health researchers
• Build on our record as national leaders in knowledge exchange and the translation of research findings into evidence-based practice and policy
• Work at the community, regional and national levels to improve health outcomes and set the research agenda
• Work with our extensive networks to be the pre-eminent source of evidence and expertise in Aboriginal and Torres Strait Islander health research.

Implementing and Communicating our Research

We have developed a research program that promotes high-quality research through increased Aboriginal and Torres Strait Islander control of the research agenda and our key partnerships. We are also fostering a new generation of Aboriginal and Torres Strait Islander health researchers through our scholarship program and our focus on capacity development.

Partnerships are our strength. By bringing together Aboriginal and Torres Strait Islander people with world-leading researchers, policy makers and experts in cutting-edge service delivery, the Institute fosters the kind of collaborative research that is making a real difference to the health and wellbeing of Australia’s First Peoples. At every stage of our research, we work with Aboriginal and Torres Strait Islander people and communities to set priorities, refine the research and ensure that findings are put into practice.

This approach has earned us a reputation as leaders in knowledge exchange. For us this is a two-way process between Aboriginal and Torres Strait Islander people, researchers and the end-users of research, in which research can be used to influence policy and planning, as well as practice and systems.

Our research, now spanning more than 15 years, provides many examples of our track record of best practice in knowledge exchange. Overall, we have set out one such knowledge exchange case study, mapping its journey from research concept through to implementing and communicating the findings of that research. For others, visit our website at www.lowitja.org.au/case-stories-researchers.

Our regional offices are in Darwin, Adelaide and Brisbane. For more information about the Lowitja Institute, go to www.lowitja.org.au

Aboriginal (and Torres Strait Islander) individuals and organisations must be fully involved — not just consulted — in the initiation, design and implementation of the research the Lowitja Institute undertakes. The Institute must disseminate its research findings widely — not just to other researchers, but to health practitioners, the corporate sector, governments, politicians of all persuasions, and to the public.

Research to improve cancer outcomes in Aboriginal and Torres Strait Islander people

Although cancer is the second leading cause of death (19%) for Australia’s First Peoples, it rarely features as a specific concern in health policies and strategy documents because they experience cancer at a lower rate than other Australians. However, those with it have a significantly higher mortality rate in the first two years after diagnosis. Mortality rates with cancer are high for Aboriginal and Torres Strait Islander people affected by cancer is one of the key supporters of research into cancer among First Peoples, it rarely features as a key concern in health policies and strategy documents because they experience cancer at a lower rate than other Australians. However, those with it have a significantly higher mortality rate in the first two years after diagnosis.

The recent award of $2.5 million in funds to establish the first-ever Centre of Research Excellence (CRE) solely devoted to improving outcomes for Aboriginal and Torres Strait Islander cancer survivors, and cancer control initiatives, which reports on the current status of Aboriginal and Torres Strait Islander cancer control initiatives and research. This project, carried out by Cancer Council SA, provides a snapshot of the care of services, available data, and priorities and gaps in research and cancer control, the report finds, among other things, that: ‘It is important that Aboriginal and Torres Strait Islander people are addressed by identifying effective and culturally appropriate cancer control measures.’

Cancer Australia publishes a commissioned study Aboriginal and Torres Strait Islander Cancer Cancer Control, which reports on the current status of Aboriginal and Torres Strait Islander Cancer Cancer Control, which reports on the current status of Aboriginal and Torres Strait Islander cancer control initiatives and research.
